# DBMS Portable Screening Plant

---

Craftsmanship  
Shape the reputation of trust

# Features

## **Flexible Configuration and Great Adaptability**

According to the different requirements of different crushing process, Dingbo Portable Crushing Plants can form the following two processes of "crushing first, screening second" or "screening first, crushing second". The crushing plant can be composed of two-stage plants or three-stage plants. The two-stage plants consists primary crushing plant and secondary crushing plant, while the three-stage plants includes primary crushing plant, secondary crushing plant and tertiary crushing plant, each of which is of high flexibility and can be used individually.

## **General Modular Design**

It adopts the overall modular design that allows for easy interchangeability of parts. Various modules can be quickly assembled, reducing the production cycle and meeting the needs of users for rapid delivery.

## **Solid and Compact Framework**

Portable Crushing Plant has simpler design and simplified structure. Body framework adopts straight girder steel, which increases strength and improves equipment reliability and production efficiency.

## **High-performance Main Units**

Portable Crushing Plant chooses high-performance main units to prolong uptime and improve quality of final aggregates, so that it can create more profits for customers. The use of high-quality crushers and screens ensures the stable output.

## **Non-concrete Foundation Installation**

The plant is equipped with adjustable hydraulic legs to adjust the body chassis. It can be easily set up on a solid surface without the need for extensive groundwork or foundation installation. This design allows for quick access to the working mode.

## **Integrated Control System**

Portable Crushing Plant adopts integrated control with a user-friendly PLC system featuring a simple and clear touch screen interface. By only pushing buttons, automated production can be achieved. The intelligent production process allows for safe production and helps reduce failure rate of equipment.

# Features

## **Quick Entrance to Operation; Flexibility Saving More Money**

Compared with fixed production lines, this mobile crushers have a shorter engineering period and rapider transition, which not only reduces the investment risk and opportunity cost of the investors, but also avoids the demolition and construction after the end of project, making it more economical and environmental.

### **Application**

Popular among aggregates, highway construction, railway construction, airport building and some other industries.

### **Material**

Most kinds of rocks, metallic ores, and other minerals, such as granite, marble, basalt, iron ore, copper ore, etc.
